

LESSON REVIEW

Module:	23 - Travelling around Europe
Topic:	TRAVELLING IN EUROPE BY GOOGLE EARTH
Lesson conducted by:	Rafał Rzepka
Date:	21st November 2018
Class:	4b
Age group:	9-10
Number of students involved:	19
Best points of the lesson plan (what the students especially enjoyed / what proved the most successful part of the lesson):	<ul style="list-style-type: none"> - showing students how to practically use computer technology to get to know the world, - teaching students how to observe and move around cities in street view in the google maps app.
Suggestions on what might be improved / modified:	The lesson might be modified by preparing worksheets beforehand. This way it would not be necessary to have a computer and printer available during the lesson (tablets would be sufficient, which is essential in a school like ours, where most classrooms are not fully equipped in all IT appliances.

LESSON REVIEW

Module:	23 - Travelling around Europe
Topic:	TRAVELLING IN EUROPE BY GOOGLE EARTH
Lesson conducted by:	Rafał Rzepka
Date:	21st November 2018
Class:	5a
Age group:	10-11
Number of students involved:	10
Best points of the lesson plan (what the students especially enjoyed / what proved the most successful part of the lesson):	The students especially enjoyed getting to know various applications of google maps and street view and using them to look around European cities.
Suggestions on what might be improved / modified:	To be more environment-friendly, ready projects could be presented to the class with the use of a projector rather than printed. A lot of paper may be saved this way and it is also more interesting visually to the rest of the class.
